

WisGate | Edge Lite 2

Variant Selection Checklist

verizon
CERTIFIED

Do you need the **Verizon-certified RAK7268CV2-V**?

1 Confirm Your Connectivity Requirements

- ☐ We only need Ethernet or WiFi.
Recommended: RAK7268V2
- ☐ We need LTE connectivity, but Verizon certification is not required.
Recommended: RAK7268CV2
- ☐ Our deployment will use the Verizon LTE network in the United States.
Recommended: RAK7268CV2-V
- ☐ Our customer, IT department, or procurement process requires Verizon-certified hardware.
Recommended: RAK7268CV2-V

2 Confirm Your Verizon Deployment Requirements

Before choosing RAK7268CV2-V, confirm that:

- ☐ Verizon LTE coverage is available at the deployment location.
- ☐ A Verizon SIM card and service plan will be available for the gateway.
- ☐ Verizon-certified hardware is required or preferred for this project.

★ Your Result

Choose RAK7268CV2-V when your deployment:

- ☒ Uses the Verizon LTE network in the United States.
- or
- ☒ Requires Verizon-certified hardware for customer, IT, or procurement approval.

Otherwise:

-  **RAK7268V2**
Ethernet/WiFi deployments
-  **RAK7268CV2**
LTE deployments where Verizon Cellular Network will not be used

Why RAK7268CV2-V for Verizon LTE Deployments?

verizon
CERTIFIED

Verizon-Certified

This gateway is carrier-certified for the Verizon LTE network, eliminating the risk of connectivity rejection or compliance issues that come with uncertified gateways.

Enterprise-Grade Security

Supports MQTT over TLS, scheduled firmware updates, and remote management via WisDM, so your deployment stays secure and maintainable at scale.

Proven Reliability

Built-in frame buffering, automatic failover across Ethernet/WiFi/LTE backhaul, and industrial-grade hardware designed for always-on indoor deployments.

Trusted by US Integrators

Used in Verizon-network LoRaWAN projects by system integrators and solution architects who require carrier-certified, remotely manageable gateway infrastructure.
